6291.0.55.001 - Labour Force, Australia, Detailed - Electronic Delivery, Dec 2014

Previous ISSUE Released at 11:30 AM (CANBERRA TIME) 22/01/2015

Summary

Main Features

Data from the monthly Labour Force Survey are released in two stages. The Labour Force, Australia, Detailed - Electronic Delivery (cat. no. 6291.0.55.001) and Labour Force, Australia, Detailed, Quarterly (cat. no. 6291.0.55.003) are part of the second release, and include detailed data not contained in the Labour Force, Australia (cat. no. 6202.0) product set, which is released one week earlier.

The Labour Force, Australia, Detailed - Electronic Delivery (cat. no. 6291.0.55.001) is released monthly. Labour Force, Australia, Detailed, Quarterly (cat. no. 6291.0.55.003) includes data only collected in February, May, August and November (including industry and occupation).

Since these products are based on the same data as the Labour Force, Australia (cat. no. 6202.0) publication, the 6202.0 Labour Force, Australia Explanatory Notes are relevant to both releases.

What's New in the Labour Force

WHAT'S NEW IN THE LABOUR FORCE

AGGREGATE MONTHLY HOURS WORKED

Through a process of ongoing quality assurance, the seasonal adjustment of the Aggregate monthly hours worked series has been refined to provide more reliable seasonally adjusted and trend data over the entire series. Two specific refinements were made to take account of:

- the Labour Force supplementary survey program, and
- the timing of Easter in 2014.

Since the October 2014 issue of this publication, all other labour force seasonally adjusted series have included adjustments to account for effects of the supplementary survey program. When the Aggregate monthly hours worked series was initially assessed no significant supplementary survey effect was identified. However, with the incorporation of additional observations and further assessment, the Persons not in the labour force supplementary survey (previously conducted each September) has been identified as

having a statistically significant effect on the Aggregate monthly hours worked series. An adjustment has been applied to remove this effect from the seasonally adjusted series.

In 2014 Easter fell unusually late in April (Easter Sunday was on 20 April) and ANZAC Day fell the following Friday (25 April). This combined with school holidays had two impacts on the Labour Force Survey. First, obtaining responses was more difficult as householders were absent due to the long weekends and holidays and the ABS extended enumeration by one day to ensure that an acceptable response rate was achieved. Second, the actual hours worked in the reference week reported for employed persons may have been less than normal due to these holidays. While the derivation of the Aggregate monthly hours worked series takes account of public holidays and school holidays, further analysis confirmed that these adjustments did not sufficiently take account of the unusually late Easter in 2014 and its proximity to ANZAC Day. An adjustment has been included in the seasonally adjusted Aggregate monthly hours worked series to account for this effect.

These two refinements have resulted in revisions to the seasonally adjusted and trend Aggregate monthly hours worked series with the largest revisions occurring in April 2013, April 2014 and September 2014. Revisions to earlier periods back to the start of the series in February 1978 were generally minimal.

The incorporation of these refinements to the seasonal adjustment of the Aggregate monthly hours worked series has no implications for other labour force seasonally adjusted series as these already include adjustments for effects of the supplementary survey program and the timing of Easter. However, as previously advised, other seasonally adjusted series will not have the adjustments for the supplementary survey effects applied to periods prior to December 2013 until the next annual seasonal reanalysis is undertaken in March 2015.

The Labour Force Aggregate monthly hours worked series are presented in the quarterly Australian National Accounts: National income, Expenditure and Product (cat. no. 5206.0) and used in deriving several productivity measures including GDP per hour worked and Gross value added per hour worked market sector. As a result of the refinements made to the Aggregate monthly hours worked series, relevant Key national accounts aggregates in publication tables 1 (trend) and 2 (seasonally adjusted) and spreadsheet table 1 from the September quarter 2014 Australian National Accounts: National income, Expenditure and Product have been updated and are available from the Download tab of the December 2014 issue of Labour Force, Australia (cat. no. 6202.0).

Article Archive

This section provides an archive of articles and analysis published in Labour Force, Australia (cat. no. 6202.0), promoting the effective use of labour force statistics. Articles are sorted by publication date.

Articles on labour related topics are also available in Australian Labour Market Statistics (cat. no. 6105.0) and Australian Social Trends (cat. no. 4102.0).

About this Release

A range of Excel spreadsheets and SuperTABLE datacubes. The monthly spreadsheets contain broad level data covering all the major items of the Labour Force Survey in time

series format, including seasonally adjusted and trend estimates. The monthly datacubes contain more detailed and cross classified original data than the spreadsheets.

Explanatory Notes

Explanatory Notes

Data from the monthly Labour Force Survey are released in two stages. The Labour Force, Australia, Detailed - Electronic Delivery (cat. no. 6291.0.55.001) and Labour Force, Australia, Detailed, Quarterly (cat. no. 6291.0.55.003) are part of the second release, and include detailed data not contained in the Labour Force, Australia (cat. no. 6202.0) product set, which is released one week earlier.

The Labour Force, Australia, Detailed - Electronic Delivery (cat. no. 6291.0.55.001) is released monthly. Labour Force, Australia, Detailed, Quarterly (cat. no. 6291.0.55.003) includes data only collected in February, May, August and November (including industry and occupation).

Since these products are based on the same data as the Labour Force, Australia (cat. no. 6202.0) publication, the 6202.0 Labour Force, Australia Explanatory Notes are relevant to both releases.

Time Series Spreadsheet (I-Note) - Time Series Spreadsheet

Data relating to unemployed persons looking for first full-time job is not available from July 2014. As highlighted in the Information Paper: Forthcoming Changes to Labour Force Statistics (cat. no. 6292.0), duration of unemployment since last full-time job is no longer collected in the Labour Force Survey questionnaire from July 2014. As this information is used, in part, to identify whether a currently unemployed person has been employed full-time in the past, unemployed persons looking for first full-time job is no longer able to be derived on a comparable basis and is therefore not available. This specific series had been highlighted to be removed with the introduction of new labour force outputs, but this has been brought forward.

Time Series Spreadsheet (I-Note) - Time Series Spreadsheet

Data relating to unemployed persons looking for first full-time job is not available from July 2014. As highlighted in the Information Paper: Forthcoming Changes to Labour Force Statistics (cat. no. 6292.0), duration of unemployment since last full-time job is no longer collected in the Labour Force Survey questionnaire from July 2014. As this information is used, in part, to identify whether a currently unemployed person has been employed full-time in the past, unemployed persons looking for first full-time job is no longer able to be derived on a comparable basis and is therefore not available. This spreadsheet had been

highlighted to be removed with the introduction of new labour force outputs.

Time Series Spreadsheet (I-Note) - Time Series Spreadsheet

Data relating to unemployed persons looking for first full-time job is not available from July 2014. As highlighted in the Information Paper: Forthcoming Changes to Labour Force Statistics (cat. no. 6292.0), duration of unemployment since last full-time job is no longer collected in the Labour Force Survey questionnaire from July 2014. As this information is used, in part, to identify whether a currently unemployed person has been employed full-time in the past, unemployed persons looking for first full-time job is no longer able to be derived on a comparable basis and is therefore not available. This spreadsheet had been highlighted to be removed with the introduction of new labour force outputs.

Time Series Spreadsheet (I-Note) - Time Series Spreadsheet

As part of the Labour Force change program the ABS has made changes to the standard for Status in Employment and the new questionnaire introduced in July no longer allows persons to be classified according to the old standard. Specifically it is no longer possible to classify persons who work for a commission without a retainer on a consistent basis with the old questionnaire. The changes to the questionnaire came into effect from July 2014, however the changes to the output will not be incorporated until the release of new Labour Force outputs. The main changes to the standard involve new groups for Owners/Managers of Incorporated Enterprises, and a small change to the definition of employees to include persons paid by commission without a retainer. Previously persons working for a commission without a retainer were classified as either Employers or Own Account Workers. With the change to the questionnaire, it is not possible to assign this group to the appropriate category in the current standard due to questionnaire sequencing. Persons who worked for a commission without a retainer have been classified to the appropriate category in the current standard based on the distribution in the corresponding month in 2013. When the first lot of new content is introduced the entire series will be revised to be consistent with the revised standard back to 1991.

Time Series Spreadsheet (I-Note) - Time Series Spreadsheet

Due to the flooding in Queensland in January 2011, the relative standard errors for January 2011 will vary across regions and will be higher than normal in some regions. The RSEs for the Darling Downs-South West and Ipswich City Statistical Regions are expected to be approximately 50% higher, while the RSEs for the Brisbane City Inner Ring Statistical Region will increase by approximately 25%. The Brisbane City Outer Ring, West Moreton and Mackay-Fitzroy-Central West Statistical Regions will have RSEs approximately 10% higher. All other regions have minimal differences. However from February 2011, the data returns to normal. Refer to the article Impact of the floods on the Labour Force Survey in

January 2011 for more information.

The new labour force sample was phased-in over four months from May to August 2013. See the article on page 10 of the May 2013 issue of Labour Force, Australia (cat. no. 6202.0) for more information. During phase in of the new sample, standard errors associated with key labour force data were expected to increase by approximately 10% at a national level, however increased standard errors and variability in the estimates may be more evident in detailed regional data during this time.

Data Cubes (I-Note) - Data Cubes

Due to the flooding in Queensland in January 2011, the relative standard errors for January 2011 will vary across regions and will be higher than normal in some regions. The RSEs for the Darling Downs-South West and Ipswich City Statistical Regions are expected to be approximately 50% higher, while the RSEs for the Brisbane City Inner Ring Statistical Region will increase by approximately 25%. The Brisbane City Outer Ring, West Moreton and Mackay-Fitzroy-Central West Statistical Regions will have RSEs approximately 10% higher. All other regions have minimal differences. However from February 2011, the data returns to normal. Refer to the article Impact of the floods on the Labour Force Survey in January 2011 for more information.

The new labour force sample was phased-in over four months from May to August 2013. See the article on page 10 of the May 2013 issue of Labour Force, Australia (cat. no. 6202.0) for more information. During phase in of the new sample, standard errors associated with key labour force data were expected to increase by approximately 10% at a national level, however increased standard errors and variability in the estimates may be more evident in detailed regional data during this time.

Data Cubes (I-Note) - Data Cubes

Due to the flooding in Queensland in January 2011, the relative standard errors for January 2011 will vary across regions and will be higher than normal in some regions. The RSEs for the Darling Downs-South West and Ipswich City Statistical Regions are expected to be approximately 50% higher, while the RSEs for the Brisbane City Inner Ring Statistical Region will increase by approximately 25%. The Brisbane City Outer Ring, West Moreton and Mackay-Fitzroy-Central West Statistical Regions will have RSEs approximately 10% higher. All other regions have minimal differences. However from February 2011, the data returns to normal. Refer to the article Impact of the floods on the Labour Force Survey in January 2011 for more information.

The new labour force sample was phased-in over four months from May to August 2013. See the article on page 10 of the May 2013 issue of Labour Force, Australia (cat. no. 6202.0) for more information. During phase in of the new sample, standard errors associated with key labour force data were expected to increase by approximately 10% at a national level, however increased standard errors and variability in the estimates may be more evident in detailed regional data during this time.

Quality Declaration - Summary

QUALITY DECLARATION - SUMMARY

INSTITUTIONAL ENVIRONMENT

Labour Force statistics are compiled from the Labour Force Survey which is conducted each month throughout Australia as part of the Australian Bureau of Statistics (ABS) household survey program. For information on the institutional environment of the ABS, including the legislative obligations of the ABS, financing and governance arrangements, and mechanisms for scrutiny of ABS operations, please see ABS Institutional Environment.

RELEVANCE

The Labour Force Survey provides monthly information about the labour market activity of Australia's resident civilian population aged 15 years and over. The Labour Force Survey is designed to primarily provide estimates of employment and unemployment for the whole of Australia and, secondarily, for each state and territory.

TIMELINESS

The Labour Force Survey enumeration begins on the Sunday between the 5th and 11th of the month, except for the Christmas and New Year holiday period. In December enumerations starts between the 3rd and 9th (4 weeks after November enumeration begins). In January enumeration starts between the 7th and 13th (5 weeks after December enumeration begins).

Key estimates from the Labour Force Survey are published in two stages. The first, Labour Force, Australia (cat. no. 6202.0), is released 32 days after the commencement of enumeration for the month, with the exception of estimates for December which are published 39 days after the commencement of enumeration.

The second stage includes detailed data that were not part of the first stage and are published in Labour Force, Australia, Detailed - Electronic Delivery (cat. no. 6291.0.55.001) and Labour Force, Australia, Detailed, Quarterly (cat. no. 6291.0.55.003). The second stage is released 7 days after the first stage.

ACCURACY

The Labour Force Survey is based on a sample of private dwellings (approximately 26,000 houses, flats etc) and non-private dwellings, such as hotels and motels. The sample covers about 0.32% of the Australian civilian population aged 15 years or over. The Labour Force Survey is designed primarily to provide estimates of key labour force statistics for the whole of Australia and, secondarily, for each state and territory.

Two types of error are possible in an estimate based on a sample survey: non-sampling error and sampling error.

Non-sampling error arises from inaccuracies in collecting, recording and processing the data. Every effort is made to minimise reporting error by the careful design of questionnaires, intensive training and supervision of interviewers, and efficient data

processing procedures. Non-sampling error also arises because information cannot be obtained from all persons selected in the survey. The Labour Force Survey receives a high level of cooperation, with an average response rate for the last year being 94%.

Sampling error occurs because a sample, rather than the entire population, is surveyed. One measure of the likely difference resulting from not including all dwellings in the survey is given by the standard error. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all dwellings had been included in the survey, and about nineteen chances in twenty that the difference will be less than two standard errors.

Standard errors of key estimates and movements since the previous month are available in Labour Force, Australia (cat. no. 6202.0). The standard error of other estimates and movements may be calculated by using the spreadsheet contained in Labour Force Survey Standard Errors, Data Cube (cat. no. 6298.0.55.001).

COHERENCE

The ABS has been conducting the Labour Force Survey each month since February 1978. While seeking to provide a high degree of consistency and comparability over time by minimising changes to the survey, sound survey practice requires careful and continuing maintenance and development to maintain the integrity of the data and the efficiency of the collection.

The changes which have been made to the Labour Force Survey have included changes in sampling methods, estimation methods, concepts, data item definitions, classifications, and time series analysis techniques. In introducing these changes the ABS has generally revised previous estimates to ensure consistency and coherence with current estimates. For a full list of changes made to the Labour Force Survey see Chapter 20 in Labour Statistics: Concepts, Sources and Methods (cat. no. 6102.0.55.001).

INTERPRETABILITY

The key estimates from the Labour Force Survey are available as original, seasonally adjusted and trend series. Seasonal adjustment is a means of removing the effects of normal seasonal variation from the series so other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove the irregular influences which may be present and therefore month-to-month movements may not be reliable indicators of underlying behaviour. To assist in interpreting the underlying behaviour, the ABS produces the trend series by smoothing the seasonally adjusted series to reduce the impact of the irregular component. For further information, see A Guide to Interpreting Time Series - Monitoring Trends (cat. no. 1349.0).

Further information on the terminology and other technical aspects associated with statistics from the Labour Force Survey can be found in the publication Labour Force, Australia (cat. no. 6202.0), which contains detailed Explanatory Notes, Standard Error information and a Glossary.

ACCESSIBILITY

Please see the Related Information tab for the list of products that are available from this collection

Standard Errors

Estimates from the Labour Force Survey (LFS) are based on information collected from people in a sample of dwellings, rather than the entire population. Hence the estimates produced may differ from those that would have been produced if the entire population had been included in the survey. The most common measure of the likely difference (or 'sampling error') is the **standard error** (SE).

The ABS considers that estimates with a relative standard error of 25% or more may be subject to sampling variability too high for most practical purposes.

To determine if an item has a relative standard error of 25% or more, in SuperTABLE, right click in the centre of the table, select annotate cells - standard annotations, and select 'Annotate RSE cut-off values'.

To indicate those cells in spreadsheets with a relative standard error of 25% or more, annotations have been applied prior to dissemination.

In addition, the tables below have been supplied to show estimates at which the relative standard error is 25%. Estimates of the size indicated in the tables, or smaller, are considered to be subject to sampling variability too high for most practical purposes.

Due to the January 2011 flooding in Queensland the relative standard errors for January 2011 will be higher than normal in some regions, therefore for Queensland the estimates at which the relative standard error is 25% will be higher than they appear in the tables below. However from February, the data returns to normal.

The new labour force sample was phased-in over four months from May to August 2013. During phase in of the new sample, standard errors associated with key labour force data were expected to increase by approximately 10% at a national level, however increased standard errors and variability in the estimates may be more evident in detailed regional data during this time.

The RSEs for July 2013 (50% old sample, 50% new sample) and onwards will be subject to revisions in the future, as more information is known about the new sample after it has been introduced.

Additional information on how standard errors for LFS estimates are produced is available in Labour Force Survey Standard Errors, Data Cube (cat. no. 6298.0.55.001).
